HEALTH & SAFETY

The Health & Safety Manager will Allocate an Area Inspection to assess the risks and make sure all the H&S protocols are in place.

Andy will receive the instructions on his mobile and schedule the inspection.

Andy will conduct the inspection to ensure H&S Compliance.

He will submit the inspection results when finished.

The Failed items will automatically workflow to the Task Activity.

Each failed task will be allocated to the person responsible

Jack who is the Plant Manager will action the failed items and ensure that the compliance is bought up to date.

Once the complete both Judy and Andy will be notified via SMS and Email.

Jack will review the processes related to the tasks and identify any failure points that can be prevented in the future logging such ideas in the continuous improvement activity.

FIELD OPERATIONS
Crane/ Equipment Inspection

Mike who is a crane operator scans the QR Code which initiates the correct crane inspection and locates him with a date and time stamp.

He Locks the inspection to himself and follows the checklist to ensure everything is operationally compliant.

Corrective Action Tasks are auto generated to the relevant people.

Both John and Jack have oversight of all activities.

This failure triggers a workflow that informs the production manager John and the plant Manager Jack as an alert.

INSPECTION FAIL

INSPECTION PASS

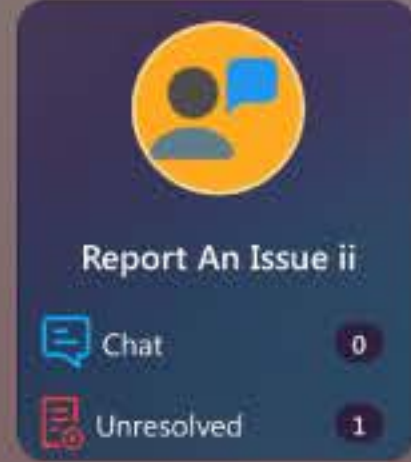

The corrective actions are taken and then all clear given for the operation of the crane.

All parties are notified via SMS and Email.

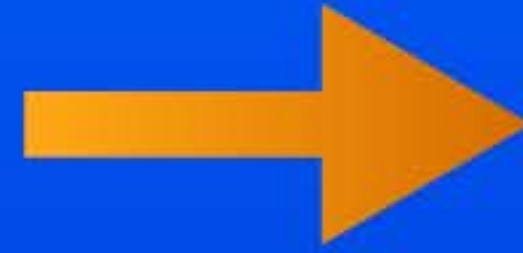

Both Jack and John review the processes related to the tasks and identify any failure points that can be prevented in the future logging such ideas in the continuous improvement activity.

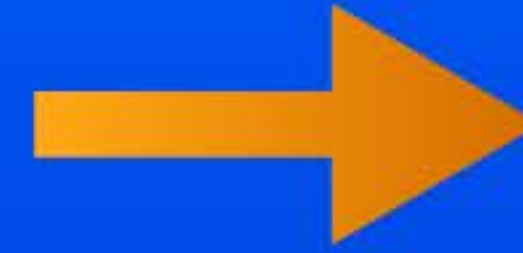

The form then auto resolves and updates the BI dashboard for reporting purposes.

QUALITY ASSURANCE
External Feedback

Liz who is a client will either scan a QR codes or send an SMS short code to provide feedback on the product or service.

The Feedback is automatically sent to the Andy and Jackie who are responsible for customer service.

Both of them get an Email and SMS alert.

The asses the feedback and communicate directly with Liz via the in-APP chat.

John the Quality Product Manager is notified of the client issue.

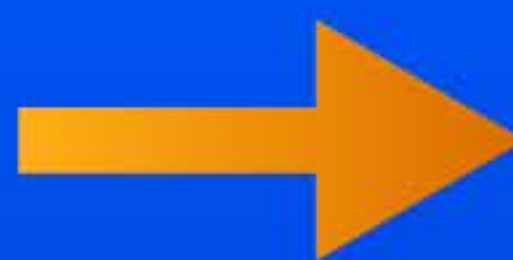

He address the problem and reverts back to all the parties concerned.

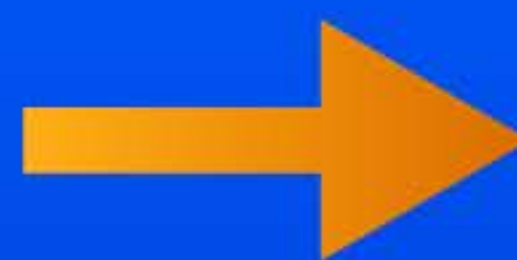

John reviews the processes related to product quality and identifies any failure points that can be addressed to prevent this from happening in the future.

PROCESS IMPROVEMENT Area Inspection Storyboard
